```
            // Simulated heavy task using sleep

            sleep(10);

            // Simulate potential transient error: (For example, randomly fail)

            if (rand(1, 3) === 1) {

                throw new Exception("Simulated transient error during report generation.");

            }

            \Log::info("Completed report generation for report ID: {$this->reportId}");

        } catch (Exception $e) {

            \Log::error("Error in GenerateReportJob for report ID: {$this->reportId}: " . $e->getMessage());

            // Re-throw exception so that Laravel handles the retry
```
