However, if you are on an earlier version or need manual registration, add the following lines to your

In the **providers** array:

Intervention\Image\ImageServiceProvider::class,

In the **aliases** array:

'Image' => Intervention\Image\Facades\Image::class,

This sets up the library for use throughout your Laravel application.

Now, this Intervention Image is extremely flexible. You can use it to perform a variety of tasks such as resizing, cropping, and adjusting image quality. For this demonstration, we will focus on resizing and optimizing images. You can define a configuration
