```
Route::get('/media/stream/{filename}',
[App\Http\Controllers\MediaController::class, 'streamFile'])-
>name('media.stream');
```

Testing File Streaming

Run the Laravel server using:

```
php artisan serve
```

---

the web browser and navigate to:

```
http://127.0.0.1:8000/media/stream/yourfilename.jpg
```

The file should be streamed directly in the browser, and caching headers should be set to optimize subsequent requests.

Implementing File Downloads
