```
crontab -e
```

Next, insert the following cron entry into the file:

```
* * * * * cd /path/to/myapp && php artisan schedule:run >> /dev/null 2>&1
```

This cron entry executes the **php artisan schedule:run** command every minute. The command checks your schedule in Kernel.php and runs any tasks that are due at that moment. Save the changes to the crontab file, so as to have the daemon to trigger Laravel's Scheduler automatically.

Let's explore two practical examples that demonstrate this automation.

Example 1: Clearing Application Logs Daily

Suppose your application generates significant log files that need
