to be cleared periodically to conserve disk space. You might have a custom Artisan command to clear logs, such as In the Scheduler's **schedule()** method, you already defined:

```
$schedule->command('logs:clear')->daily();
```

To verify that the command works, you can run it manually:

```
php artisan logs:clear
```

Here, it confirms that log files in **storage/logs** are deleted or rotated as intended.

At midnight, the cron entry triggers **php artisan** The Scheduler then checks and runs the **logs:clear** command. You can verify its execution by inspecting your Laravel logs or by checking the file system for the absence of old logs.

Example 2: Generating Weekly Summary Reports
