---

This line instructs Laravel to trigger the backup command every day at 2 AM using the **backup:run** Artisan command. If you choose only the databases specified in your **config/backup.php** are backed up; omit it to backup both databases and file storage as defined.

Creating and Testing Backup Routine

While the Laravel Scheduler will run the scheduled tasks if your cron is correctly set up, you need to make sure that Laravel's Scheduler itself is triggered every minute by running:

---

```
crontab -e
```

---

Then add the following entry:

---

```
* * * * * cd /path/to/myapp && php artisan schedule:run >> /dev/null 2>&1
```

---
