- It creates the backup directory if it doesn't already exist.

- It creates a compressed archive of all files in the media directory.

- Optionally, the script can delete the original files after archiving by uncommenting the deletion line.

- Finally, it echoes a confirmation message.

Integrating Shell Script with Laravel Commands

Next, we then integrate the shell script execution into your Laravel environment by creating a custom Artisan command that will invoke the shell script as below:

---

php artisan make:command ArchiveImages

This generates a new command class located at Then open the **ArchiveImages.php** in PhpStorm and modify it as follows:
