```
    // Schedule the analytical report generation to run daily at 4 AM.

    $schedule->command('report:generate')->dailyAt('04:00');

    // You can schedule other tasks here as needed.

}
```

This instructs Laravel Scheduler to check every minute whether any scheduled tasks are due. At 4 AM, Laravel will execute the **report:generate** command automatically, producing the report without any manual intervention.
