So now, to implement secure user authentication, pull the Laravel Breeze as a development dependency by running:

---

composer require laravel/breeze --dev

Once the package is installed, initialize Breeze using the Artisan command:

---

php artisan breeze:install

This command scaffolds authentication routes, controllers, and views within your application.

Installing Frontend Dependencies

The Laravel Breeze's installation also sets up Tailwind CSS and other assets used in the authentication views. Install these dependencies by running:
