This command creates a new file called **RoleMiddleware.php** in the **app/Http/Middleware** directory.

Then, we open the **RoleMiddleware.php** and update it to check the authenticated user's role. For example, suppose you want only users with an "admin" role to access specific routes. So, we modify the middleware as follows:

```
namespace App\Http\Middleware;

use Closure;

use Illuminate\Http\Request;

use Illuminate\Support\Facades\Auth;

class RoleMiddleware

{
```
