

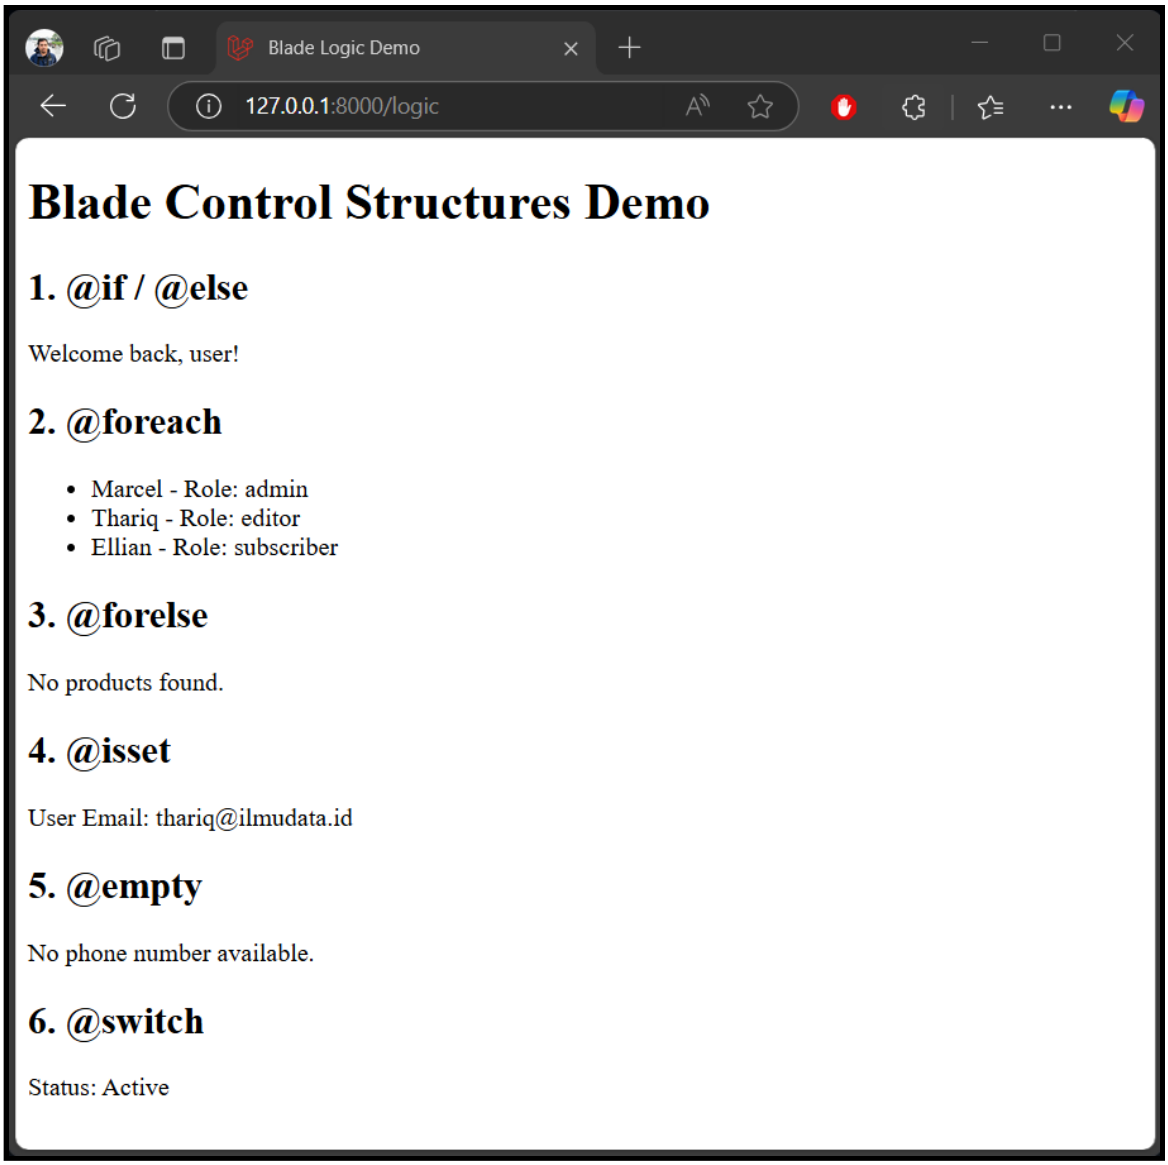

Figure 6.2: Blade Logic Demo

6.12.5 Summary

In this lab, you:

- Created a controller that passed various data types to a view.
- Applied Blade control structures (`@if`, `@foreach`, `@forelse`, `@isset`, `@empty`, and `@switch`) in your Blade file.
- Rendered dynamic content based on conditions and loops.

This exercise gives you a strong foundation for writing conditional logic and loops in Laravel views using Blade.
