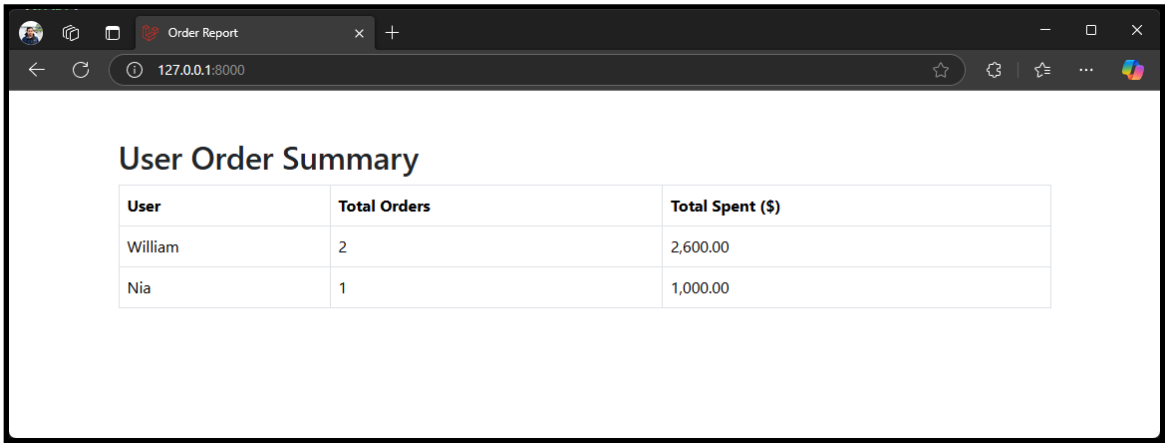

Figure 11.5: Laravel 12 Order Report.

11.7.5 Summary

In this lab, you learned how to:

- Use **Laravel Query Builder** for SQL joins across related tables.
- Apply **aggregate functions** such as `SUM` and `COUNT`.
- Group and sort the results.
- Create a **Bootstrap-styled report** to display the results.

This lab showcases how Laravel's Query Builder can be used for analytical reports and dashboards in real-world applications.

11.8 Exercise 34: Query Builder with Raw Expressions and Secure Input Parameters

11.8.1 Description

In this lab, we will build a Laravel 12 web application that demonstrates how to use **raw expressions** in **Query Builder** using `DB::raw()`, `whereRaw()`, and `orderByRaw()`. You will also learn how to **securely accept and sanitize user input** to prevent SQL injection when using raw expressions. The interface will include a filter form styled with **Bootstrap 5**.
