```
</form>
@endsection
```

Save all the files and close them.

12.10.4.10 Step 10: Run the Application

After creating the views, we can run the application using the built-in PHP server. Run the following command in your terminal:

```
php artisan serve
```

Visit http://localhost:8000/products to use the app.

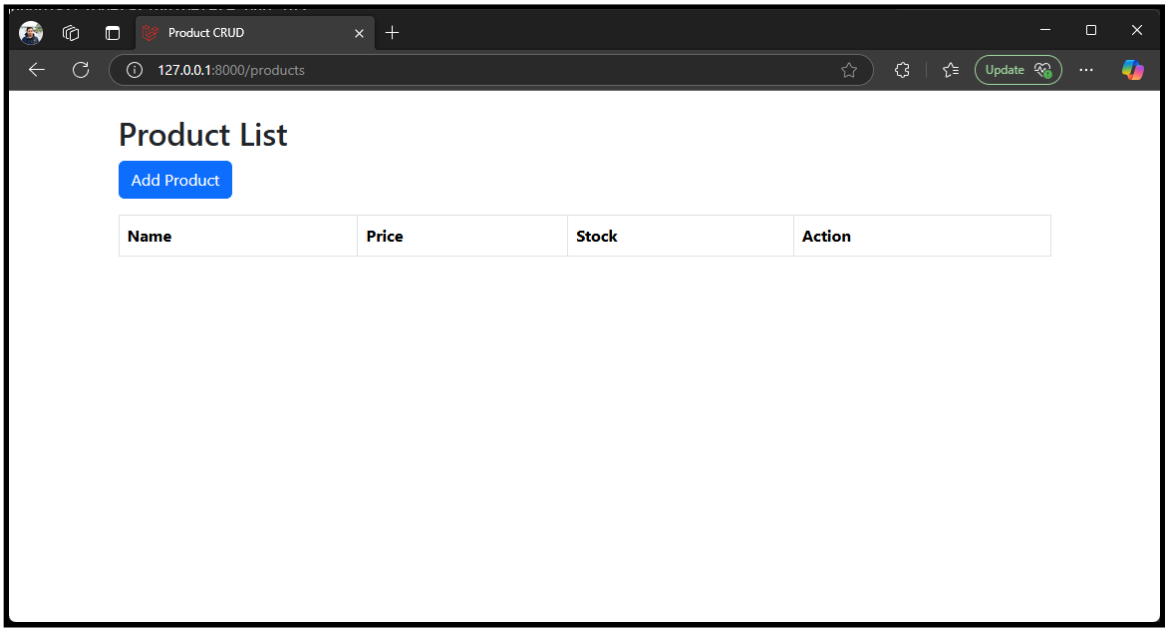

Figure 12.7: Product CRUD application.

You can add, edit, and delete products using the application. The data will be stored in the `products` collection in the `productdb` database in MongoDB.

Click the `Add Product` button to add a new product. Fill in the form and click `Save`. You should see the new product in the list.
