```
    }
}
```

### 12.11.4.8 Step 8: Define Route

We define the route for the `BlogController` in the `routes/web.php` file. Open the `routes/web.php` file and add the following code:

```
use App\Http\Controllers\BlogController;

Route::get('/blogs', [BlogController::class, 'index']);
```

Save the file and close it.

### 12.11.4.9 Step 9: Create View with Bootstrap

We create a layout file and a view to display the blog posts. Create `layout.blade.php` in the `resources/views` directory.

Codes for `resources/views/layout.blade.php`:

```
<!DOCTYPE html>
<html>
<head>
    <title>Blogs</title>
    <link href="https://cdn.jsdelivr.net/npm/bootstrap@5.3.3/dist/css/bootstrap.min.css"
rel="stylesheet">
</head>
<body>
<div class="container mt-4">
    @yield('content')
</div>
</body>
</html>
```

Create a new directory called `blogs` in the `resources/views` directory. Inside the `blogs` directory, create a file called `index.blade.php`.

Codes for `resources/views/blogs/index.blade.php`:

```
@extends('layout')

@section('content')
<h2>Blog Posts</h2>
@foreach($blogs as $blog)
    <div class="card mb-4">
        <div class="card-body">
            <h4>{{ $blog->title }}</h4>
            <p>{{ $blog->content }}</p>
            <h6>Comments:</h6>
            <ul class="list-group">
                @foreach ($blog->comments as $comment)
```
