```
    public function run(): void
    {
        $this->call(ProductSeeder::class);
    }
}
```

Run the seeder:

```
php artisan db:seed
```

You should verify the data in MongoDB Compass. Open the `paginationdb` database and select the `products` collection. You should see 100 products with random prices.

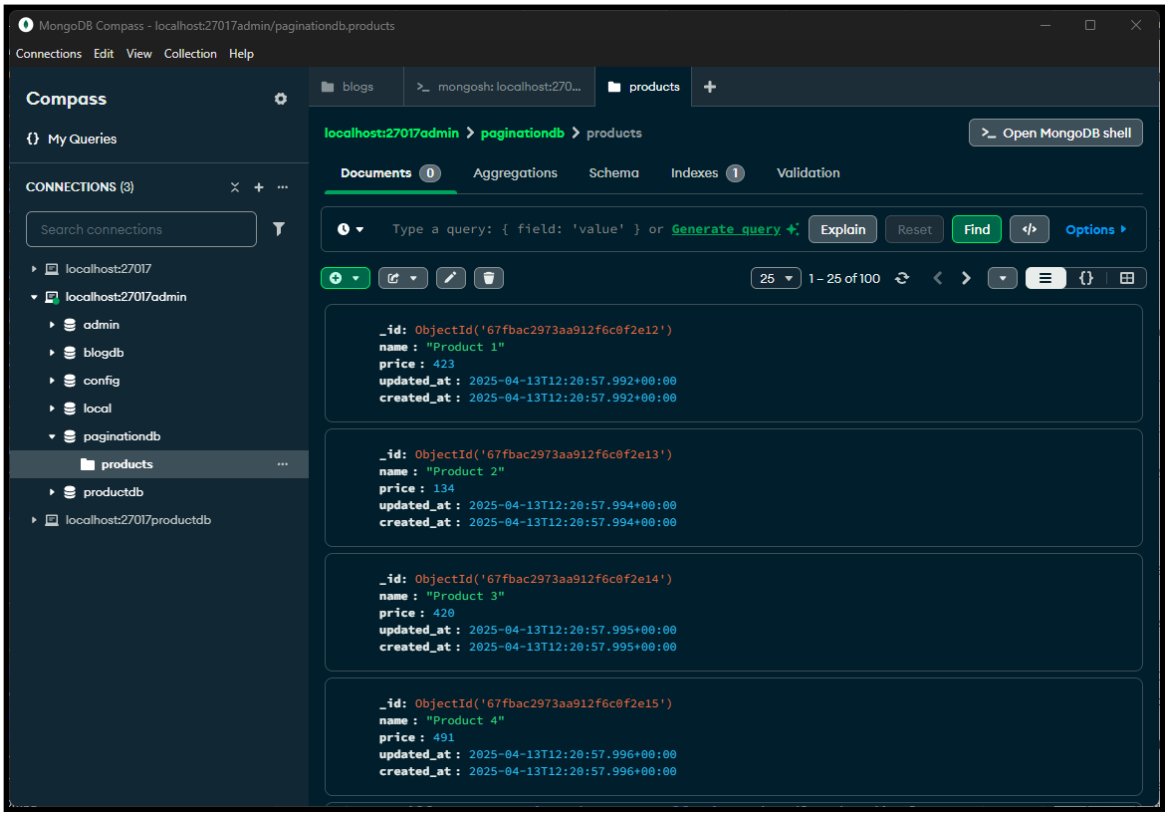

Figure 12.17: MongoDB Compass with seeded data.

12.12.4.7 Step 7: Create Product Controller

We will create a `ProductController` to handle the display of products. Run the following command to create the controller:

```
php artisan make:controller ProductController
```

Edit `app/Http/Controllers/ProductController.php`:
