```
        ]);

        $result = match ($validated['operator']) {
            'add' => $validated['number1'] + $validated['number2'],
            'sub' => $validated['number1'] - $validated['number2'],
            'mul' => $validated['number1'] * $validated['number2'],
            'div' => $validated['number2'] != 0 ? $validated['number1'] / $validated['numbe
        };

        return view('calculator', [
            'result' => $result,
            'number1' => $validated['number1'],
            'number2' => $validated['number2'],
            'operator' => $validated['operator']
        ]);
    }

}
```

3.8.4.4 Step 4: Create the Blade View

Create a file at `resources/views/calculator.blade.php` with the following content:

```
<!DOCTYPE html>
<html>
<head>
    <title>Laravel Calculator</title>
</head>
<body>
    <h1>Simple Calculator</h1>

    @if ($errors->any())
        <div style="color: red;">
            <ul>
                @foreach ($errors->all() as $error)
                    <li>{{ $error }}</li>
                @endforeach
            </ul>
        </div>
    @endif

    <form method="POST" action="{{ route('calculator.calculate') }}">
        @csrf
        <input type="number" name="number1" value="{{ old('number1', $number1 ?? '') }}"
placeholder="First Number" required>
        <select name="operator" required>
            <option value="add" {{ ($operator ?? '') == 'add' ? 'selected' : '' }}>+
</option>
            <option value="sub" {{ ($operator ?? '') == 'sub' ? 'selected' : '' }}>-
</option>
            <option value="mul" {{ ($operator ?? '') == 'mul' ? 'selected' : '' }}>*
</option>
            <option value="div" {{ ($operator ?? '') == 'div' ? 'selected' : ''
}}>/</option>
        </select>
        <input type="number" name="number2" value="{{ old('number2', $number2 ?? '') }}"
placeholder="Second Number" required>
        <button type="submit">Calculate</button>
    </form>
```
