> *All routes in this group will be prefixed with `/admin`.*

4.11.4.4 Step 4: Add Actions to Controllers

We'll create a simple action that returns a view with a welcome message. Here's the code for `DashboardController.php`:

```
namespace App\Http\Controllers\Admin;

use App\Http\Controllers\Controller;

class DashboardController extends Controller
{
    public function index()
    {
        return view('admin.dashboard', ['message' => 'Welcome to Admin Dashboard']);
    }
}
```

We'll create a simple action that returns a list of users. Here's the code for `UserController.php`:

```
namespace App\Http\Controllers\Admin;

use App\Http\Controllers\Controller;

class UserController extends Controller
{
    public function index()
    {
        $users = ['Ria', 'Lie', 'Jon'];
        return view('admin.users.index', compact('users'));
    }

    public function show($id)
    {
        $user = "User #" . $id;
        return view('admin.users.show', compact('user'));
    }
}
```

4.11.4.5 Step 5: Create Simple Views

Create folders and files under `resources/views/admin/`. Then, create the following files:

- `dashboard.blade.php`
- `users/index.blade.php`
