

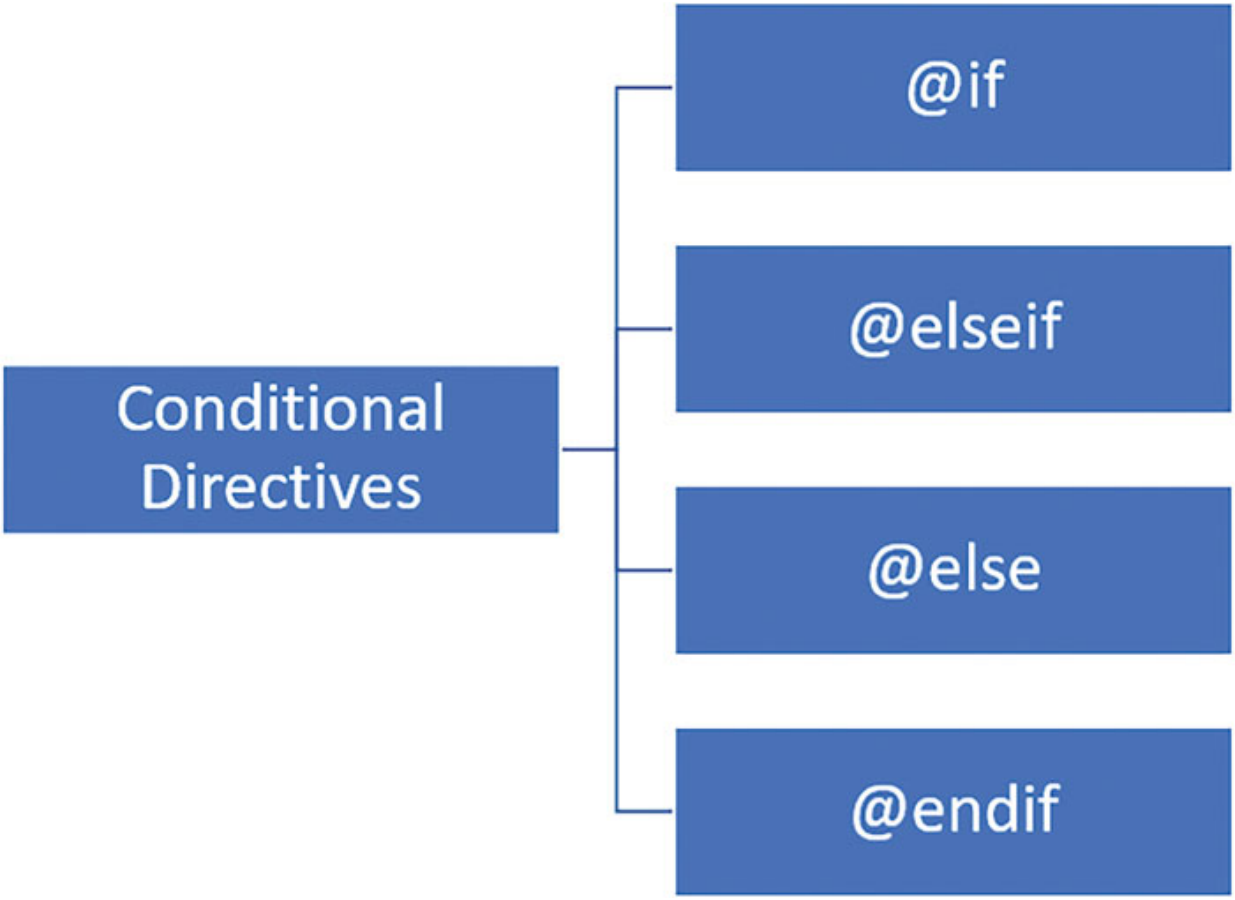

Figure 4.2: *Conditional Directives in Laravel*

The directives **`@if`**, **`@elseif`**, **`@else`**, and **`@endif`** can be used to create if statements. These directives perform the same tasks as their PHP equivalents:

```
@if (count($fruits) === 1)
  There is one fruit!
@elseif (count($records) > 1)
  There are multiple fruits.
@else
  There are no fruits.
@endif
```

The **`@isset`** and **`@empty`** directives can be used as practical substitutes for their respective PHP functions in addition to the conditional directives already covered:

```
@isset($fruits)
  // $fruits is defined and is not null
```
