were being done for the first time in the country and the groundlevel technicians had had no prior exposure to this kind of work. I saw new performance dimensions growing among my team members.

Performance dimensions are factors that lead to creation. They go beyond competencies such as the skil s and knowledge of the individual. Performance dimensions are broader and deeper than what a person must know and be able to do in order to function wel in his or her job. They include attitudes, values and character traits. They exist at various levels of the human personality. At the behavioural level—at the outermost ring of the tree—we can observe skil s and measure knowledge. Social roles and self-image dimensions are found at the intermediate level. Motives and traits exist at the innermost or core level. If we can identify those performance dimensions which are most highly correlated with job success, we can put them together to form a blueprint for outstanding performance in both thought and action.

Although SLV-3 was stil in the future, its subsystems were being completed. In June 1974, we used the Centaur sounding rocket launch to test some of our critical systems.
