dogmatic utterances. My col eagues, associates, leaders; the complex science of rocketry; the important issues of technology management; al seem to have been dealt with in a perfunctory manner. The despair and happiness, the achievements and the failures—differing markedly in context, time, and space—al appear grouped together. When you look down from an aircraft, people, houses, rocks, fields, trees, al appear as one homogeneous landscape, it is very difficult to distinguish one from another. What you have just read is a similar bird'seye view of my life seen, as it were, from afar.

My worthiness is all my doubt –
His merit – all my fear –
Contrasting which my quality
Does however – appear.

This is the story of the period ending with the first Agni launch—life wil go on. This great country wil make enormous strides in al fields if we think like a united nation of 900 mil ion people. My story—the story of the son of Jainulabdeen, who lived for over a hundred years on Mosque Street in Rameswaram island and died there; the story of a lad who sold newspapers to help his brother; the
