So after all that, we successfully sent a payout to a single user. Now it's time to go back to the `SendPayoutsJob` (the one that loops through all the users and dispatches the job we discussed so far) and send them a notification:

```
Bus::chain([
  function () use ($user, $report, $dateService) {
    try {
      ExportTransactionsAction::execute(
        $user,
        $dateService->lastMonth(),
        $report,
      );
    } catch (Exception) {
      $report->status = TransactionReportStatus::Failed;

      $report->save();
    }
  },
  new SendPayoutJob($user, $report, $payoutUuid, $dateService->lastMonth()),
  new SendPayoutNotificationJob($user, $payoutUuid, $report),
])->dispatch();
```

The job itself it pretty simple:
