As I said there can be errors while exporting the report so we only attach it if it's marked as `Done`. In the worst case, users can export it themself using the `transaction-reports` API or you can create a scheduled job that tries to export it again.

The last step is to schedule the payout job:

```
class Kernel extends ConsoleKernel
{
  protected function schedule(Schedule $schedule): void
  {
    if (app()->isProduction()) {
      $schedule->job(SendPayoutsJob::class)->monthly();
    }

    $schedule->job(CleanUpExpiredTransactionReportsJob::class)->daily();
  }
}
```
