Exporting transaction reports

Let's export a transaction report and see how many queries the app runs. In this case, we don't want to check requests but jobs instead:

There are lots of `AppendQueryToSheet` jobs. 40 to be exact. That's because we process 250 rows in one chunk and the current user 10 000 transactions. If we check the queries they look like this:

There are only 4 queries and 3 of them were made by Laravel itself. There's only one query we're running directly:
